

Perennials for Dry, Shady Locations

Dry, shaded locations are often the most difficult to plant. Not only do plants suffer from lack of sunlight, but moisture is exhausted by neighboring trees and shrubs. To overcome such conditions, add large amount of organic mulch, and begin regular watering and feeding programs, because such soils are not only water deficient, but also depleted in plant nutrients.

(Sp)= Spring

(Su)= Summer

(F)= Fall

Alchemilla mollis (Su)	Lady's Mantle
Brunnera macrophylla (Su)	Siberian Bugloss
Epimedium niveum (Sp)	White Epimedium
Geranium hyb. (Su)	Geranium
Lamium maculatum hyb. (Sp)	Deadnettle
Mahonia repens (Sp)	Creeping Barberry
Pachysandra terminalis (Sp)	Japanese Pachysandra
Polygonatum commutatum (Sp-Su)	Solomon's Seal
Polygonum affine (Sp)	Knotweed
Pulmonaria saccharata (Sp)	Lungwort
Stachys lanata (Su)	Lamb's Ear
Vinca minor (Sp)	Periwinkle

Perennials for Very Moist, Sunny Locations

Asclepias incata (Su)	Butterfly Weed
Eupatorium (Su)	Boneset
Iris ensata (Su)	Japanese Iris
Lobelia (Su)	Lobelia
Monarda (Su)	Bee Balm
Myosotis (Sp, Su)	Forget-Me-Not
Physostegia (Su)	Obedient Plant
