

NERINE BOWDENII
(Surprise Lily)

Beautiful pink orchid-like clusters of 8-12 flowers which grow on a two foot strong stem. The leaves will grow and disappear before the flower “surprisingly” comes up in late September. Nerine makes a wonderful long lasting cut flower as well.

LOCATION:

Part shade or filtered sun.

PLANT:

In well drained soil 6” deep and 12” apart.

FLOWERING TIME:

Late September or early October.

AFTER CARE:

For best results, lift and store bulbs over the winter. If the area is protected a heavy mulch will protect the bulb.
